Educational & Training Services

رؤيـة تـبـدأ بالتعليـم والتدريـب

Vision Begins with Education

Educational & Training Services

1. The services offered involve providing educational services for postgraduate master's and doctoral studies in the Gulf region through contracting and collaborating with international universities worldwide.
2. Furthermore, these educational services are extended within universities through an educational platform designed for the universities. This platform serves as the technical arm of the university to deliver both live and recorded lectures within the university. It also assists the students at various educational levels in aspects, such as attending lectures, taking exams, and managing the academic affairs.
3. The provided services include an educational platform for schools, allowing students to attend classes and take exams remotely.
4. These educational services include providing academic tutoring across the various school levels, with a particular focus on the secondary education and tracking the progress of the students' learning. The platform serves as a general tool for the students.
5. In addition, there is a training platform that offers diverse training materials covering both the administrative and technical educational fields in multiple international languages. The platform is distinguished by its instant video translation capability and the provision of comprehensive summaries of the recorded training materials in the user's selected language.
6. A library of tests in various fields and languages that allows the trainees or users to request tests. The test library utilizes the artificial intelligence to prepare the tests.
7. A platform that assists the learners in uploading the training materials and translating them into multiple languages, using modern technologies and artificial intelligence.

E-Portals

Electronic portals are one of the most important mechanisms through which the integration takes place between the users, information, systems, and work procedures within the organization, and electronic portals provide several features, such as content and records management, institutional search, website management, browsing, user management, and permissions.

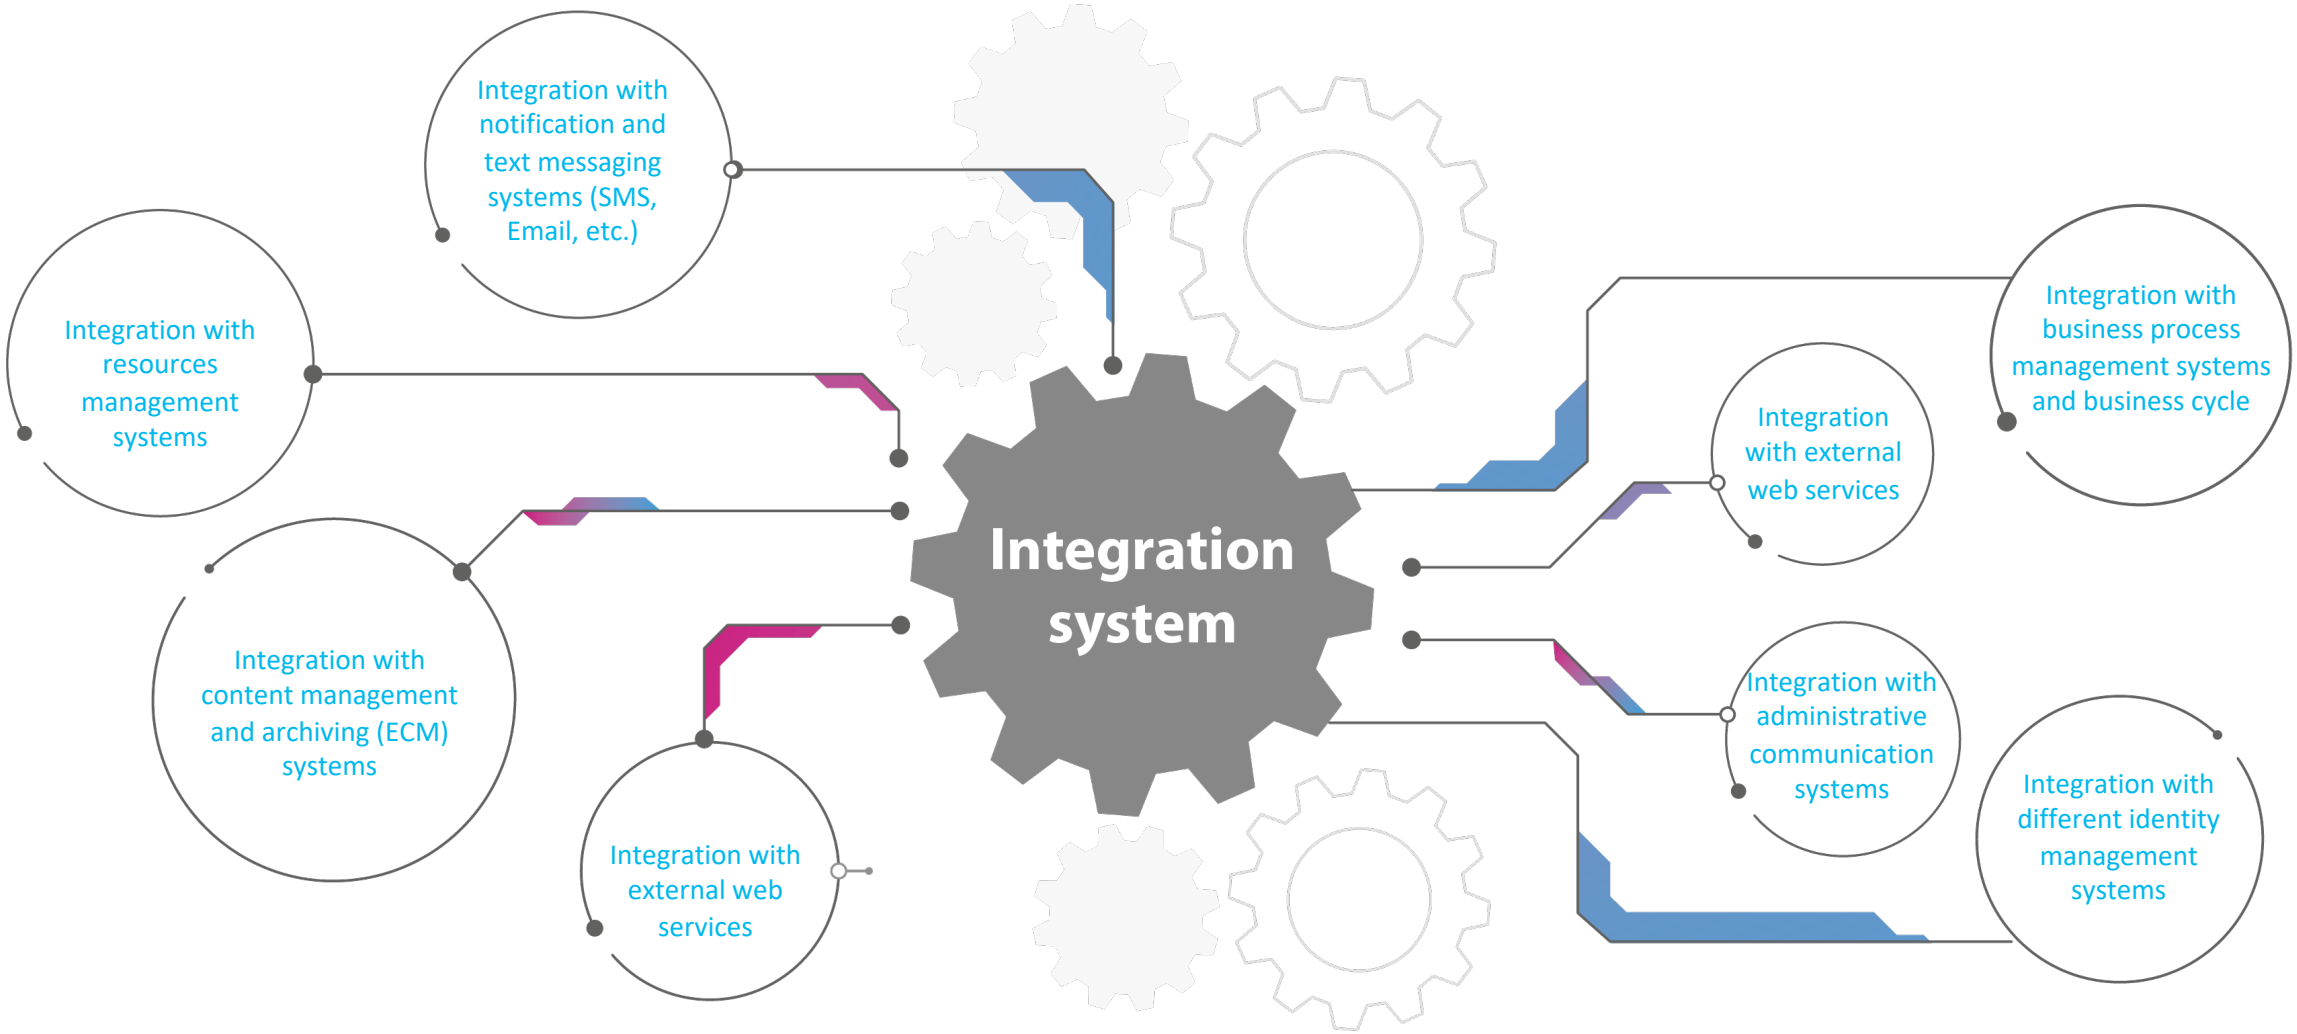
- Designing an interactive interface for the internal and external electronic portal.

- Building the content structure of the portal and determining the browsing method and the data sources.

- Building web parts and making them customizable and editable for the users.

- Building the internal and external gateways as well as the integration with the internal and external systems.

Integration with the Internal & External Systems



Main Systems Application Services

- We create solutions in providing a suitable and smooth workplace environment with services that enable the management of operations with the highest degree of efficiency.
- We build clear strategies, design services, and provide the necessary data and reports that enable making the right decisions and vision with a strategic and insightful dimension.
- We identify and analyze the strategic and statistical performance indicators and follow up on them faster.
- We know the performance indicators of the various departments in the organization, link them with the strategic objectives, and work to improve and automate them.
- We build and automate the indicators and reports (added value dashboards).
- We provide technical support and maintenance services for the systems and programs developed by the company, whether at the customer or upon request.

Support Services

Strategy Follow-up Management System

The speed of decision-making for business owners depends on the efficiency of the systems used in providing accurate information in a timely manner, so the system of managing and following the strategies and the subsequent operational plans and comparing them with the immediate completion rates contributes to the ease of follow-up, addressing the defects and the speed of making sound decisions in a timely manner, which leads to increasing the efficiency of departments and raising their competency.

The most important features of the strategy follow-up management system

- Help decision-makers to make the right decisions at the right time
- Extracting all types of reports necessary for follow-up and monitoring
- Saving time and effort in preparing, reviewing and following up on the strategic and executive plans

One of the most prominent characteristics of the system and its components

Strategic, operational and achievement performance indicators

Where all tasks and the extent of progress in achievement and deviation from the planned performance indicators are displayed on specialized screens, helping to make the right decisions at the right time

Specialized Panels

Starting from the screens of initiatives and their programs, projects and tasks

Objectives panel

Where it clarifies all the strategic and operational objectives

Plans panel

Where it is possible to launch in more detail on the strategic and operational plans

Control panel

The main panel to form a comprehensive view of all components of the strategic and executive plan, its indicators and the extent of achievement.

Project Management Office System

On-time delivery is one of the biggest challenges in project management, and because we are keen on time accuracy, we have worked to rely on integrated, flexible and easy-to-use systems, starting from project planning, time and financial scheduling, saving all relevant documents and extracting professional reports with ease to follow up and monitor the project performance.

One of the most prominent features of the project management system

- The ability to manage multiple projects at the same time
- Monitor team performance and perform required tasks through Stream Activity
- Assist project managers in viewing and dealing with critical points
- Available in Arabic and English
- Division of projects, scheduling of tasks, and allocation of resources
- View all macro and microdata related to projects
- Keeping all documents related to the projects of various types
- Can be integrated with other systems easily
- Granting authorities according to the different departments and tasks
- Use Gantt charts to track project progress
- All information is managed and stored on cloud storage systems
- Ease of use of the system

Club Governance

The governance system is intended for sports clubs and federations, as it contains a general database to record the organizational structure of the club or sports federations as a basic procedure for operating the system.

The system was built flexibly to meet the various needs of the clubs and sports federations, and the system was built flexibly that allows the club's management to convert any paper form into an electronic form without the need for programming, and thus the club can convert all paper forms within it into electronic forms in a record time, with all fields of each form flexibly determined.

The governance system is the basis that distributes the authorities to view the data of the club's employees, and this enhances governance practices, the data of the employees, whether they are (administrators, players, or technicians) is recorded according to the organizational structure entered in the system.

- The governance system contains an unlimited number of electronic services that enable the club to convert all paper procedures and forms into electronic ones for all club employees or for a specific department.

- The governance system can be accessed directly, you only need an internet browser, and no software is required.

- It is fully compatible with all smart devices
